

High level of human control

Strategy

- ① A game where users ~~can~~ take turns to build ^{or} something together (virtually) _{create}
- ② A product which allows users feedback on their teamwork & gives advice for improvements
• position on field etc.
- ③ A product that translates language in real time during conversation with multiple people
- ⑤ Voice controlled chess / Go board
- ⑥ magnetic vest that keeps mountain climbers / travelers aware of each others' presence and proximity by giving sound & haptic feedback when a person is slightly left behind.

A game where users
can choose to control
their ~~other~~ opponent
at given times

Biofeedback assisted Yoga app

① * sensors that attach to your body while you do Yoga

↳ vibrates when you are doing something wrong

↳ lasers to guide them when its changes activity

↳ records your movements & show you like 'art' of your yoga routine.

↳ gives you feedback on your progress and awards for reaching milestones

↳ i love this

↳ creates a streak if you use it multiple days in a row

↳ exoskeleton to help you do the headstand ^{supported} by ~~giving~~ that allows user to start by using easier "angle" and slowly increase it then eventually helps you achieve the final pose - while also safeguarding you from falling down.

② Public Speaking skills app

↳ Allows you to practise your speeches and interviews

↳ Gives you statistics on your skills

③ Mixed reality boxing exercise game to help people practice boxing punch accuracy

3 Action

A training game for soccer teams where everyone must complete a soccer-related task simultaneously before they can move onto the next level.

An exoskeleton to help with rehab exercises. The exoskeleton could be synced to a trainer's movements to assist and teach the correct form to the body wearing the exoskeleton.

An exoskeleton for canoe athletes that helps rowing synchronisation between team members by showing signal via their exoskeleton.

Computer analyses where to strike and sends the troops.

④ Simulation

- ① Exoskeleton to help stroke patient to learn how to walk again
 - ② VR that help trains patient to pick virtual object and move it to a virtual bowl
 - ③ A smart sole that helps patient's standing and mobility skill by analysing their walking stability and adjust the angle of the sole's surface to help them realign themselves
 - ④ Smart sensors that detect ~~stroke~~ stroke patient's movement in physiotherapy ~~and by sensing~~ to quantify the number of repetitions during the exercises
- maybe for runners how they can optimise their skills
