

high-level ^{human-control} ~~for~~ $\leq$ ~~can~~ > 1 body

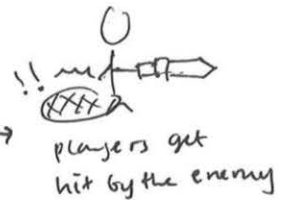

A VR kayaking game with multiplayer

→ can be VR.

- ~~Phone~~ A shooting game where there are a screen / layer to show the players where to shoot. (+ some game rules to give a collaborative experience)
- Augmented exhibition space → ~~A / K / W / L / K / L~~
+ game to be played by multiplayer within that space
- A ~~digital~~ ground / jogging track that could give suggestion to the runner on where to steps on the surface

must be used by
one equipment per 2

the sword regain its function
by tapping on the shield

the players must be well coordinated
to finish the game together.

Quadrant I. Exploration

within one body & high-level human control

- Ideas:
- ④ a ^{small} ~~square~~ object to reflect human's emotion
i.e. • ~~by grabbing~~ $\frac{0}{1}$ grabs the object while angry → the object
colors turn red & warm
• when $\frac{0}{1}$ sad to grab the object → the color turns blue & cold feeling
 - ④ a wearable device to draw together + AI

③ A smart cockpit with real force/haptic feedback
to do driving practicing

- ④ A tennis coaching app ~~with~~ that connected to the ball.
(whether the ball is top-spin or volley, etc. then it uses haptic feedback
if we didn't hit the ball correctly.) i.e. with wearable device like
whoop.
