

Q. 1. △ Intra - Corporeal & High-level of human Control.
(body 1)
△ Biofeedback assisted yoga app.

- ① Own body position tracking yoga App.
- ② Yoga set calculating & notice
- ③ muscle pressure tracking suit for fitness
- ④ ~~eating~~ digestive ^{nutrients} tracker for eating
- ⑤ skeletal ~~scan~~ position tracker for body posture
- ⑥ Interactive learning platform
- ⑦ ~~Adobe~~ Adobe, G-suites to help design or office work.
- ⑧ Motion Capture technology
- ⑨ timekeeping device

Q2 A collaborative dance game where tech suggests synchronised moves

1. body perception

2. Rhythm and movement design

1. Dance competition, body position tracking

2. Dance hitting game,

3. synchronised ~~musical learning~~ hand movements for musical learning

4. synchronised prosthetics legs for disability training

5. Data analytic platforms

6. Stock trading platforms.

7. Digital marketing system.

Q3: Action

~~Two people cooperate~~

1. people operates with the computer to stimulate Data.

2. Flying stimulation.

3. Exoskeletons

4. Imitations

5. Cloth changing Game, ~~act~~

6. sports movement simulators to calculate athletes physical ability

7. computer generated ~~cooking~~ collaborative cooking experience.

Q 4

- ~~self~~ automatic self endoscopy with ai detection
- automatic bone ~~re~~ internal bone repair
- Automatically driving car machine.
- ~~VR~~ Robot to help people. with different tasks
- Smart customer service.
- Computer simulation
- Data calculation
- Face based mutual image constructor
-

^{music}
the teacher able
to control ~~and~~ the
hand movement of the
student using a sort of
wearable what? gloves

colocation

where?

when?

during practice or
lesson

~~music~~
person that
wants to who?
learn music
and
music teacher

Synchronised hand movements
for musical learning

Card 2: Negotiation of control

The negotiation of physical
control will play a big
part ~~here~~ in this
project. When the

student are being
corrected, their

hand will be restricted

and guided to the corrected place

by the teacher. Can be from the other way
and the hand movement can be felt by the teacher

why?

the teacher able to
guide and show
the hand movement
in real time from
different location

How?

Both of the user will
use the wearable device
which can provide haptic
and movement resistance feedback.

without having to see them.
